SKILLS

Data Engineering

Batch and streaming pipelines, Apache Airflow, dbt, Apache Kafka, Spark Structured Streaming, change data capture, data contracts

Analytics

SQL window functions, cohort analysis, experiment design, Looker, Metabase, product metrics

Languages & Platforms

Python, Scala, PostgreSQL, ClickHouse, Snowflake, Terraform, Kubernetes, GCP (BigQuery, Pub/Sub, Dataflow)

EDUCATION

MSc in Applied Mathematics

Ivan Franko National University of Lviv
Sep 2014 — Jun 2016

BSc in Mathematics

Ivan Franko National University of Lviv
Jun 2014

LANGUAGES

Ukrainian — native
English — C1

Olena Marchenko

Data Engineer · Analytics Lead

SUMMARY

Data engineer with 9 years of experience building batch and streaming pipelines for logistics and retail. I own data platforms end to end, from ingestion contracts to the dashboards that operations teams use every morning.

5 years at Larkspur Freight: Data Analyst → Data Engineering Lead, 4 direct reports.

KEY PROJECTS · LARKSPUR FREIGHT · 2023–2025

Systems I designed and shipped; each one replaced a manual process.

- **Route cost model.** Built a nightly model that prices 14,000 delivery routes from fuel, toll and driver-hour data; dispatchers now plan from it instead of a spreadsheet maintained by hand.
- **Warehouse event stream.** Replaced hourly CSV exports with a Kafka stream of 2.3M scanner events a day, cutting the delay of the stock dashboard from 60 minutes to under 2.

EXPERIENCE

Larkspur Freight (formerly Westbridge Cargo)

Mar 2020 — Jun 2025

Full-time · Remote · 5 yrs 4 mos

Data Engineering Lead — Jan 2024 — Jun 2025
Senior Data Engineer — Feb 2022 — Jan 2024
Data Analyst — Mar 2020 — Feb 2022

Data platform

- Migrated 140 Airflow DAGs from a single VM to Kubernetes executors, removing the nightly queue that delayed morning reports.
- Introduced data contracts between the warehouse and three product teams; schema breaks reached production 0 times in the following year.

Data platform cont.

- Cut the monthly warehouse bill by 35% by partitioning the five largest tables and expiring raw snapshots after 90 days.
- Wrote the runbook for late-arriving data and trained the on-call rotation to use it.

Team

- Hired and onboarded 3 data engineers; ran weekly 1:1s and quarterly growth plans for 4 direct reports.
- Started a fortnightly analytics review with operations managers, which became the main channel for new dashboard requests.

Freelance — Data Analyst

Sep 2016 — Feb 2020

Built reporting for small online shops: sales dashboards, stock forecasts and marketing attribution in spreadsheets and Metabase.

SIDE PROJECTS

Tram delay tracker (Python, PostgreSQL, Grafana) — collects public tram positions every 30 seconds, computes delays per stop and publishes a weekly report that the city transport office cited in its 2024 timetable review.

Board game library (Django) — a lending catalogue for a local club with reservations, waiting lists and overdue reminders.

SKILLS

Practices

Code review, on-call rotation, incident reviews, technical writing, mentoring

COURSES

Streaming Systems Workshop

Data Guild · Oct 2023
